

Wireless Tips from TMP PRO DISTRIBUTION

- ### REMOTE ANTENNA PLACEMENT

The placement of the remote antennas can mean the difference between a wireless system that performs, and one that doesn't. A correctly placed antenna is one that is in the line sight of the performance area. Remember to keep a minimum of a wavelength between antennas. This will allow the best operating field for your system and the strongest connection to the receivers while eliminating drop outs.
- ### CHOOSING THE RIGHT CABLE

The right gauge and signal strength is critical to the success of a wireless microphone system. For example, Gepco's VS5010 50 ohm cable along with Kings Connectors 755-114-9 guarantees a flawless operating wireless system. Remember, no more than 25ft without adding an RF inline amplifier. The maximum recommended distance for remote antenna placement is 100ft.
- ### CHOOSING THE RIGHT WIRELESS FOR YOUR JOB

With white space issues, emerging technologies, spectrum congestion, and increasingly sophisticated digital systems complicating every aspect of the wireless market, TMP Pro offers the security and know-how that ensure system investments are going to operate in the most demanding environments. Whether installing in a church sanctuary, or supplying a major world tour, TMP Pro's custom processes and vast selection of lines from Shure, Sennheiser, Audio-Technica and AKG ensure that you and your client get the right system for the application.

SHURE PG Series Wireless

Shure's Performance Gear Wireless Systems feature advanced, reliable components. Each system provides 10 selectable channels, allowing up to eight systems to be used simultaneously. All systems use wireless versions of PG Series microphones, transmitting to either a PG4 diversity receiver or PG88 dual receiver. Features include an internal antenna, 250' range, XLR and 1/4" outs, 8-hour battery life, and an overall 45Hz-15kHz frequency response. Systems are rackable with optional URT rack tray.

SHURE PGX Series Wireless

The PGX Series offers wireless versions of Shure's legendary mics. Each system includes the PGX4 receiver, with Auto Frequency Selection, 1/4" and XLR outs, and an infrared link for automatic syncing of receiver and transmitter; up to 12 systems can be used simultaneously. The PGX2 handheld transmitter is available with a choice of capsules, and the PGX1 bodypack supports instruments and hands-free mics. Both feature status LED's, 8 hour operation, and 300' range.

SHURE SLX Series Wireless

The SLX Series offers the next level of wireless performance. Systems include the SLX4 receiver with Auto Frequency Selection, 1/4"-XLR outs, infrared sync link, detachable antennas, backlit LCD, power/frequency lockout, rack-mount hardware, and metal construction. The SLX2 handheld transmitter is available with a choice of capsules, while the SLX1 bodypack supports instruments, headsets, and lavaliers. Backlit LCD's, 8hr operation, 300' range. 20 systems can be used simultaneously.

SHURE ULX Professional Series Wireless

The ULX Professional Series shares the characteristics of the Standard series, but adds more advanced features and controls. These features include a 5-segment RF meter, advanced multi-function LCD, Group Scan function, 1/2 wave antennas, frequency lockout, volume lockout, and more. The Group Scan function automatically finds the channel group with the most available clear frequencies; an efficient tool for multi-system applications.

WIRELESS MICROPHONES

Sennheiser

SENNHEISER ew100 G3 Series Wireless Systems

Versatility for every style of music and presentation. The ew100 G3 series features single touch wireless linking between transmitters and receivers for fast setup. A sound check mode allows checking of the audio and RF signal at any time. 20 frequency banks with 12 preset frequencies each, plus a user-programmable bank allow for easy running of multiple G3 wireless simultaneously. Rackmount receivers feature integrated EQ's and guitar tuners.

SENNHEISER ew500 G3 Series Wireless Systems

The ew500 G3 line provides the most features and performance in the evolution series. It offers an especially high number of presets possible per frequency bank (32), allowing for the easy setup of many wireless systems. The built-in Ethernet port allows computer control and monitoring with a PC running Sennheiser's Wireless System Manager software. Large graphic displays provide quick access to information. One-touch sync function automatically links transmitters with receivers.

SENNHEISER

audio-technica 200 Series Freeway Wireless Systems

Audio-Technica's Freeway 200 Series Wireless Systems are designed to provide reliable performance, easy setup and clear, natural sound quality. Each 200 Series professional VHF wireless system includes a receiver and either a body-pack transmitter or a handheld microphone/transmitter on a specific crystal-controlled frequency. Features include advanced dipole antenna for extended range, RF/WF peak indicators, volume control, 1/4" output, trim control, On/Standby/Off switch on transmitters, locking connectors, and more.

AKG WMS 40 FLEXX Guitar Bug

The WMS 40 Flexx Guitarbug System delivers reliable high fidelity performance without the obtrusive cable between instrument and bodypack. The Guitarbug features a "FlexJack" swiveling jack plug that connects it to every type of output jack from brands like Gibson, Fender, Ibanez, PRS and more, automatically hugging the instrument. A noiseless on/mute/off switch and status LED are easy to check and operate. The GB 40 Flexx Guitarbug also provides an input gain control to match the output of single or double coil pickups, active or passive.

AKG WMS 450 Series Wireless Systems

The AKG WMS 450 series is an excellent choice for applications requiring several wireless systems to be used simultaneously. Up to 12 channels can be used at once within the same subband, and even large systems will work smoothly in crowded RF environments. With available antenna splitters and power supplies, the WMS 450 allows for scalability as needs evolve. Features include Auto Setup mode with infrared transmitter, rehearsal function for identifying dead stops, two color display, and more. Contact your TMP Pro rep for a complete list of options and accessories, plus expert advice when building a large scale wireless system.

AKG Perception Series Wireless Systems

Perception Wireless Systems bring the performance of the highly regarded Perception Series microphones to the wireless world, delivering brilliant sound with a surprisingly easy to use design. The frequency-agile Perception series allows operation of up to eight systems per band and is available in Vocal, Instrument, Presenter, and Sports configurations. All sets feature the SR 45 receiver, providing professional XLR and 1/4" jack outputs, with adjustable audio level and squelch threshold. System transmitters, including handheld and compact bodypacks, provide gain control, low-battery indicators, noiseless on/off/mute switches, and up to 8 hours of operation from a single AA battery (included).

AUDIX RAD-360 Series Wireless Systems

RAD-360 is a frequency agile UHF wireless microphone system with 193 selectable frequencies and dual-tuner, true diversity receivers. Operating in the UHF band between 614-662 MHz, the RAD-360 is designed for a wide range of professional applications. All components feature easy-to-use menu driven displays. RAD-360 handheld transmitters have a gain setting control to prevent overload or distortion, and are available with a choice of OM series capsules. Body pack transmitters are constructed of durable ABS composite and housed in a protective metal cradle. All kits include antennas, rack mount kit, and power supply. Optional Amplified Antenna Distribution Systems and antenna boosters are available; contact your TMP Pro rep for more information on configuring larger wireless systems.

**RE-2PRO Wireless Receiver**

The RE-2 Series wireless receiver brings sophisticated, professional features for an affordable price. The RE-2 PRO is a completely programmable, frequency-agile system with one-touch Auto-ClearScan™. It operates over 28MHz (six TV channels), providing 1112 possible channels per band. Connections are made via XLR and 1/4" line level outputs. A large LCD display monitors Group/Channel, Frequency, Diversity, AF Levels, and RF Levels. The RE-2 PRO receiver includes all of the rack-mount hardware needed to install one or two units with front-mount antennas. Supplied with two detachable quarter-wave antennas. Compatible with RE-2 series transmitters.

**RE-2 Series Wireless**

EV's RE-2 UHF wireless series allows up to 10 channels to be used simultaneously per band. A-band carries 648-676 MHz, while G-band carries 614-642MHz. Features of the RE-2 receiver include one-touch Auto-ClearScan, programmable frequency selection in 25kHz steps, and Posi-phase diversity. A backlit LCD displays group, channel, frequency, battery level, diversity operation, RF, and audio signal information. RE-2 transmitters feature an LCD display and >8hr battery life.
